Vyr - A Digital Safe Space for Trans People Worldwide

Introduction

On platforms like Meta, TikTok, or X (formerly Twitter), trans people are regularly exposed to harassment, hate, and algorithmic invisibility. Vyr aims to change that - as a mobile, decentralized platform specifically for trans communities worldwide. Built on the AT Protocol, Vyr will be a space of self-determination, mutual support, and safety.

Core Features (MVP Vision)

- Posts in text, image, and video

- Community groups by topic, language, or location

- Private messaging and group chats

- Livestreams (via integrations)

- A marketplace for second-hand items

- Curated trans-relevant news & resources

- Based on the AT Protocol for decentralization & user ownership

Why Vyr?

Vyr is more than an app - it is a solidarity-driven project. In a time of growing anti-trans hostility, the trans community needs a digital space that belongs to them: free from toxic algorithms, corporate control, or centralized moderation. Instead: built on trust, community, education, and real visibility.

About the Project

Vyr is in its conceptual stage. I am currently working as a solo founder - with no funding, no team, and no programming background. What I do have is a clear vision, hands-on experience in community organizing, and a deep commitment to building a platform where trans people can thrive.

I am actively looking for:

- Developers with AT Protocol experience

- Designers & UX minds

- Mentors & allies

- Funding and support for open, community-based infrastructure
